

Symbol of Perfection

Mechanical diameter sorting machine

The installation consists of a raised platform with a feeding belt where the picking boxes are emptied and where the cherries must be separated manually.

From the feeding belt the cherries are brought onto 5 pair of angled shaft, with step by step reduced diameters. By means of 4 discharge belts the sorted cherries are brought to the packing tables.

- **Accurate and fruit friendly**
- **Affordable**
- **Compact construction**
- **Very reliable**

Standard configuration:

- Feeding belt (3000 x 730 mm), with raised working platforms (option) and gully
- 4 Size exits with discharge belts
- Diameter sorting undersize -22, 22-24, 24-26, 26-28, 28-30 mm and oversize 30+
- Capacity ± 400 kg/hour
- Separator for undersize and rubbish
